Update Library name and add library to menu using Power Automate

Asked 6 months ago Active 6 months ago Viewed 90 times

I have here 2 questions :

0

1. I created a document library with a specific name using the HTTP request action and would like to give this document library a friendlier name. If i use the same HTTP Request action, it creates an additional library with the new name> Any idea how i can simply update an existing library name ?
2. Does anyone know how to add a newly created library automatically into the left handed menu of the site ? When i create it with the HTTP Request, it goes into the site content but does not show up in the site menu...

Thanks a lot for your help ! (sorry but my "hello all" is not showing up..)

Here is your complete answer to your 2 questions asked above

1

1. You want to create a SP Library using an HTTP request right? if so you can easily do that using Power Automate and "Send an HTTP request to SharePoint" action like this :

Send an HTTP request to SharePoint

* Site Address: Sales and Marketing -
https://m365x610292.sharepoint.com/sites/SalesAndMarketing

* Method: POST

* Uri: _api/Web/Lists

Headers	
Accept	application/json;odata=verbose
Content-Type	application/json;odata=verbose
Enter key	Enter value

Body

```
{
  "__metadata": {
    "type": "SP.List"
  },
  "BaseTemplate": 101,
  "Description": "",
  "Title": "LIB1",
  "ListExperienceOptions": 1
}
```

2. For showing your SP Library to Navigation, you need to add : "OnQuickLaunch": true to your JSON body as follow :

Send an HTTP request to SharePoint

* Site Address: Sales and Marketing -
 https://m365x610292.sharepoint.com/sites/SalesAndMarketing

* Method: POST

* Uri: _api/Web/Lists

Headers:

Accept	application/json;odata=verbose	✕
Content-Type	application/json;odata=verbose	✕ 🗑️
Enter key	Enter value	

Body:

```
{
  "__metadata": {
    "type": "SP.List"
  },
  "BaseTemplate": 101,
  "Description": "",
  "Title": "LIB23",
  "ListExperienceOptions": 1,
  "OnQuickLaunch": true
}
```

here is the JSON code :

```
{
```

```

    "__metadata": {
      "type": "SP.List"
    },
    "BaseTemplate": 101,
    "Description": "",
    "Title": "LIB23",
    "ListExperienceOptions": 1,
    "OnQuickLaunch": true
  }

```

3. Now you want to update your existing library "Title" to a new Title, you need to do some changes on your HTTP request as follow :

The screenshot shows the 'Send an HTTP request to SharePoint' interface. The configuration is as follows:

- Site Address:** Sales and Marketing -
 https://m365x610292.sharepoint.com/sites/SalesAndMarketing
- Method:** POST
- Uri:** _api/Web/Lists/GetByTitle('LIB1')
- Headers:**

Accept	application/json;odata=verbose	X
Content-Type	application/json;odata=verbose	X
X-HTTP-Method	MERGE	X
IF-MATCH	*	X
Enter key	Enter value	
- Body:**

```

{
  "__metadata": {
    "type": "SP.List"
  },
  "Title": "New Title",
  "OnQuickLaunch": true
}

```

as you can see :

- The first change i made, i add ../getbytitle("old library title") in order to access the

sharepoint online - Update Library name and add library to menu using Power Automate - SharePoint Stack Exchange endpoint of that specified library,

- second, you need to add "**X-HTTP-Method : MERGE**" and "***IF-MATCH : ****" headers
- and then update your JSON code with your new required title, easy heh ?

Please, let me know if this worked for you, it's working for me pretty fine !

Hi @Aimen Boulahia, thanks for your answer. Yes this works. I cold create a new library, i just added "OnQuickLaunch: true" and now i see it in the menu. but what i was mentionning is that i still can't update the library name. so my screenshot was showing this is how to create the library (and add it to the menu) but how can i update the title ? if i follow what Jerry_MSFT said, it's the same as creation, that, just creates an additional library... thanks !! – [Kaddrik](#) Jan 20 at 9:24

So your need now, how to update the Title of an existing Library, right ? – [AIMEN BOULAHIA](#) Jan 20 at 9:34

Ok so i quickly tested... but i hqve qn error becquse of the GetByTitle("libraryName") it says that "web/lists/GetByTitle("MyLib") is not valid. but it that's the right library name.... – [Kaddrik](#) Jan 20 at 10:24

AAAAAHHHH !! ok... it works, i just put single quotes in the parenthesis of GetByTitle. Cool !!! thanks a lot for your help !!! :-) – [Kaddrik](#) Jan 20 at 10:34

Yeah, indeed single quotes works all the time, while double quotes work on French tenant, happy for you – [AIMEN BOULAHIA](#) Jan 20 at 14:15

▲ For updating the library title, please use the body below: It is an update request.

1

```
{
  "__metadata": {
    "type": "SP.List"
  },
  "Title": "NewLibraryName"
}
```

For creating libraries showed in left navigation, you will need to add the property

`"OnQuickLaunch": true`

My test works like this:

Url

Type

```
{
  "__metadata": {
    "type": "SP.List"
  },
  "Title": "NewLibraryName"
}
```

```

Body
{
  "AllowContentTypes": true,
  "BaseTemplate": 101,
  "Description": "Description",
  "OnQuickLaunch": true,
  "Title": "AABBCC"
}

```

For the title update, it's the same thing as creating a new library. when i try this, it creates a new one with the new name... my URI is the same , method POST and body identical.

am I missing something ?

POST

_api/web/lists

accept	application/json;odata=verbose	X
content-type	application/json;odata=verbose	X
Enter key	Enter value	

```

{
  "_metadata":{
    "type":"SP.List"
  },
  "BaseTemplate": {x} varTemplate x ,
  "Description": " Description x ",
  "Title": " LibraryName x ",
  "ListExperienceOptions":1
  "OnQuickLaunch":true

```

Here, you want to create a new library with a specified name, or you want to update the title of an existing library? – [AIMEN BOULAHIA](#) Jan 20 at 8:53

I want to update the name. I have a short name which is "LibraryName" and i have a "FriendlyName" property. I create the library, it takes the LibraryName...but then i want to update it so it takes the "FriendlyName". is it clearer? So I guess i have to add a HTTP Request and add to the URI "_api/web/list/getByName("LibraryName")" so in the body I can have Title reference "FriendlyName". I just didn't have time to test if this is correct yet, i have lots of calls and meetings today :-P – [Kaddrik](#) Jan 20 at 9:40 

Very well, check my answer again, i just update it – [AIMEN BOULAHIA](#) Jan 20 at 9:47
